The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kang et al. 6,498,927 (Kang) discloses a variable gain amplifier arrangement having a gain controller 894 that senses a plurality of powers from the power detections units like 820. This controller then uses the plurality of sensed powers to set the gains of each of the power amplifiers in a "parallel" manner. The controller of Kang is not composed of separate controllers in a daisy chain type of arrangement as claimed that utilizes the signal from the preceding controller. In other words the controller of Kang sets the gain of the individual amplifiers based on all the sensed powers and not on the sensed power of the input of the amplifier in question and the signal from the preceding controller.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael B. Shingleton whose telephone number is (571) 272-1770.
